selecont

Be yourself in every context

Not everything is for everyone.

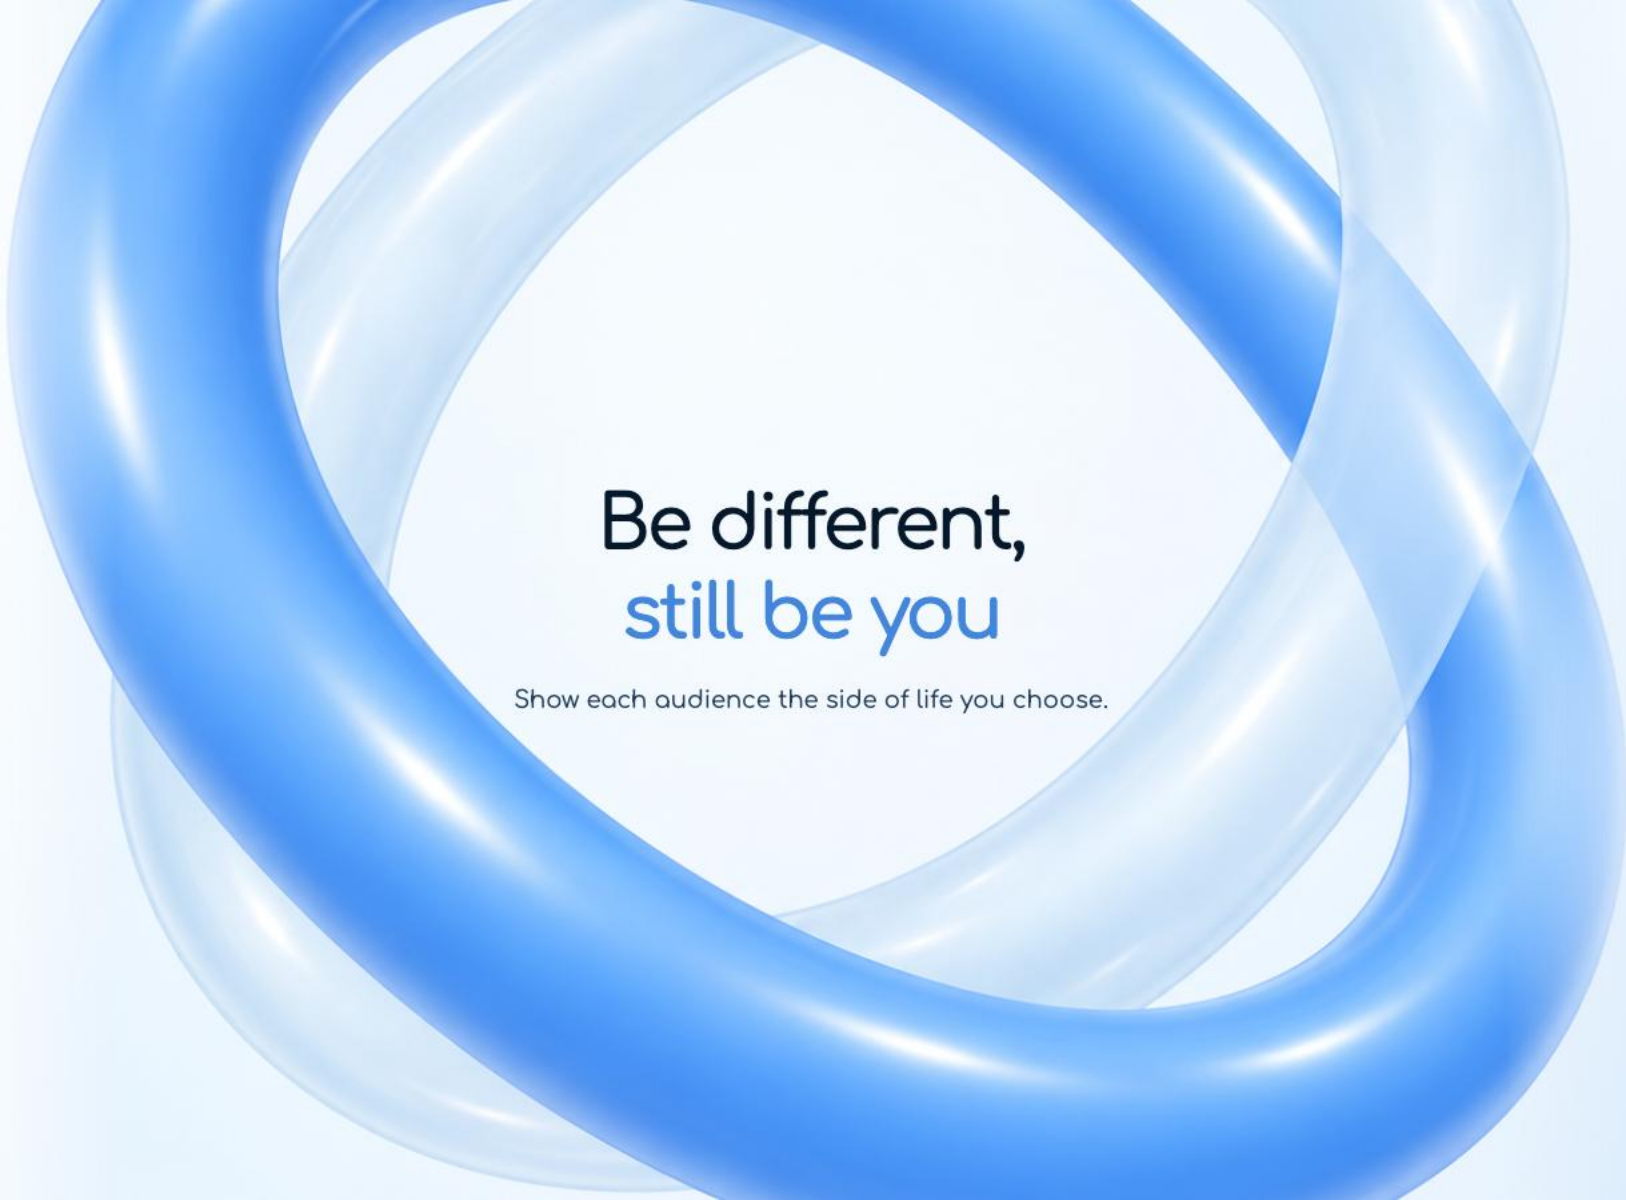

Jokes with friends, family news and work projects are meant for different people. When those audiences meet, a personal moment may feel right for some and wrong for others.

"My friends will get this"

"I want to share this with my family"

"This is for my colleagues"

With selecont, you choose the right context for every post.

Be different,
still be you

Show each audience the side of life you choose.

@grisha

Quiet evenings at home and family stories.

Family

Home photos, family events and news Grisha shares only with those closest to him.

@grisha

Inside jokes, music and plans for the evening.

Friends

Meetups and jokes Grigory keeps between friends.

@grisha

Projects, study and work in one place.

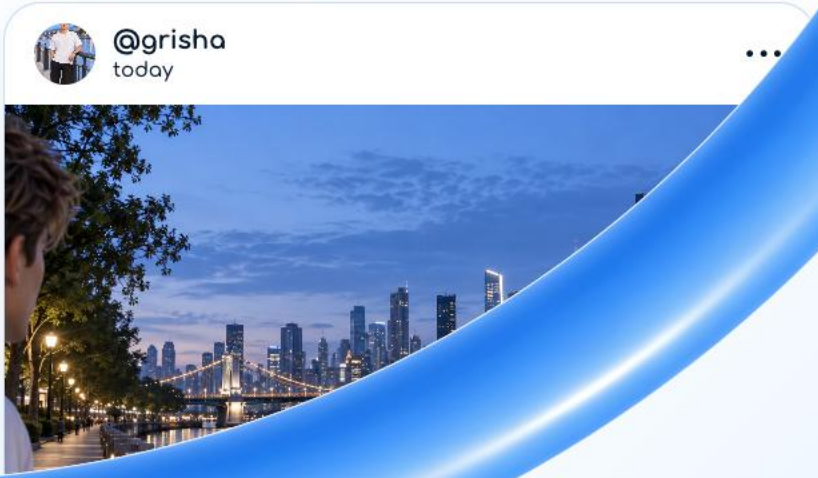

Colleagues

Projects and work updates without family posts.

@grisha

The open part of the profile.

Public

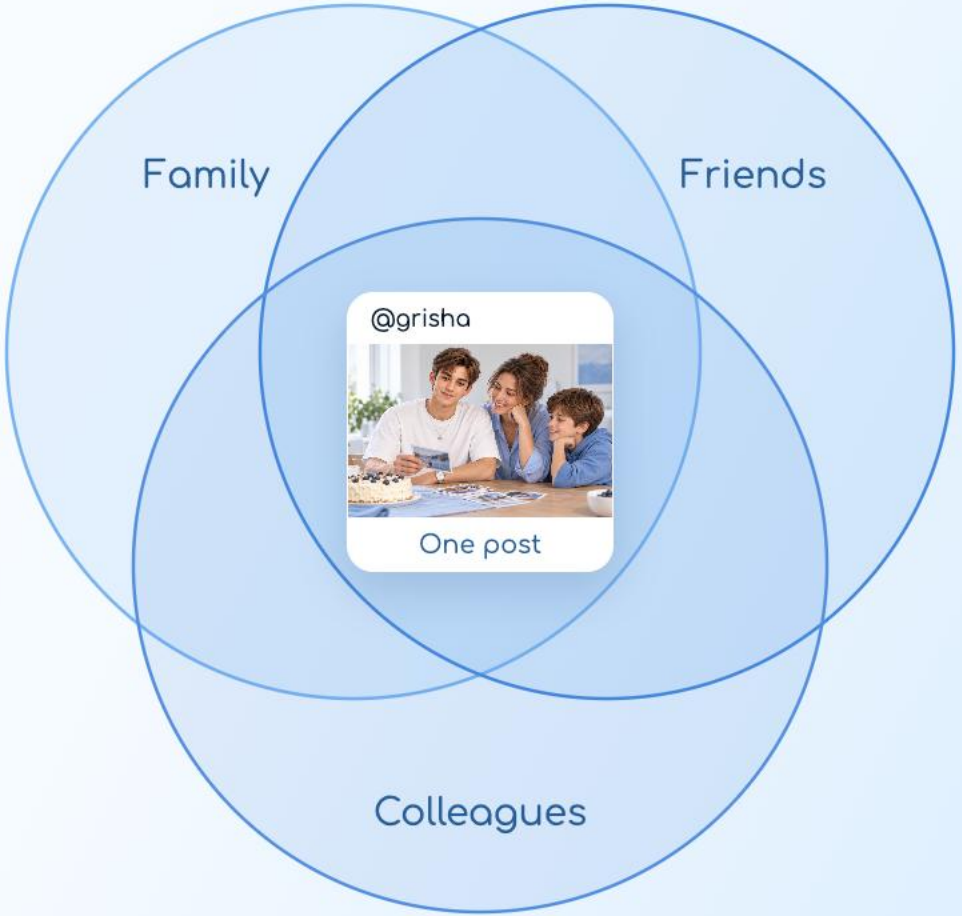

Anyone can see this part of his profile.

One post.
Three circles.

Grigory selects family, friends and colleagues. He publishes once — members of all three selected circles see the same post.

The post is hidden from everyone else: Public is not selected.

At the centre: one shared post.
Each circle is an audience.

Audience diagram · circles chosen by the author

One post. Separate conversations.

Family and friends see one photo, but comments and replies stay within their own audience.

What family sees

@grisha
The same post

Comments on the post

@mama
What a lovely day!

> @grisha

> > @grisha
> > Yes! We found it this weekend.

The text is removed. The thread stays. Other people's replies remain.

One shared like count for the post.

Who can see your context

Following is not enough. The author grants access to a private circle.

	Anonymous	Registered	Follower outside the circle	Follower in the circle	Author
Public profile and post	✓	✓	✓	✓	✓
Comment on a Public post	—	✓	✓	✓	✓
Private profile and post	—	—	—	✓	✓
Private discussion	—	—	—	✓	✓
Manage circles	—	—	—	—	✓

Circle names and membership are hidden from viewers. The author manages all their circles.

You decide who stays in a circle.

Add someone to a circle and they see its profile and posts. Remove them and access closes.

@alex

In "Friends"

Sees the private side of your profile

Remove from circle

→

@alex

Sees Public

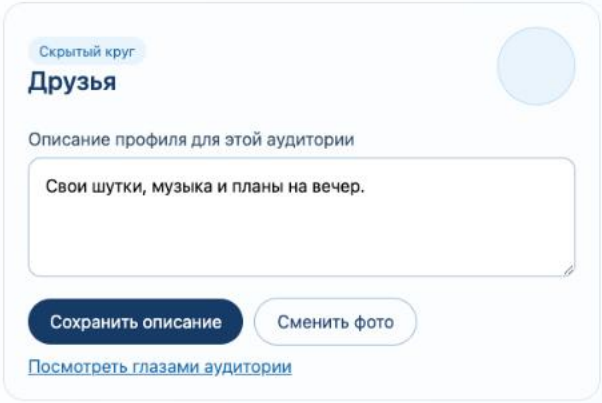

Sees only the public part

- — Private posts are unavailable
- — Private threads are unavailable

You manage the circles. Only you see their names and members.

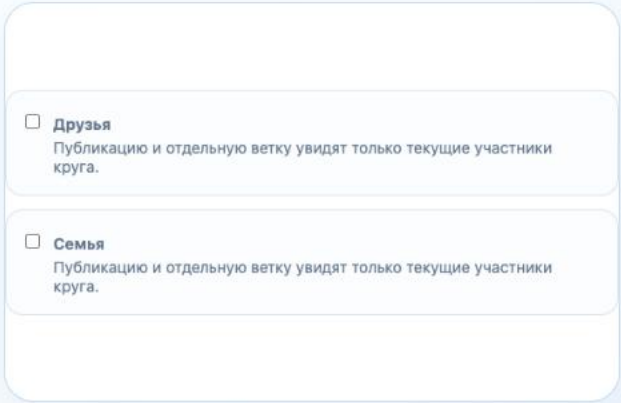

From profile to conversation — in a working demo.

Circles and profiles

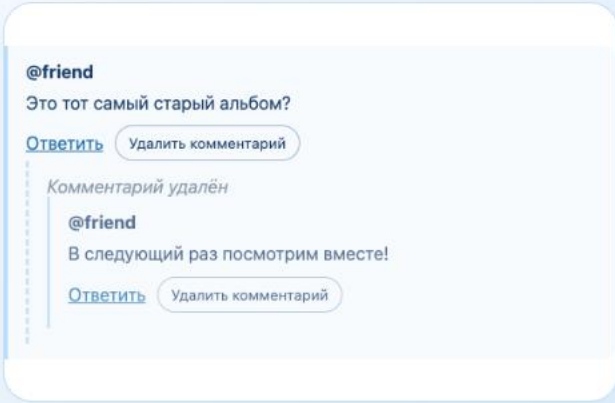

Different bios, photos and audiences

Publishing

One post for selected circles

Discussions

Replies, deletion and separate threads

Sign-in and sessions · following · photos · shared likes · access revocation

95 checks passed

One context. Three parts of sharing.

The author chooses a circle once. It connects a profile version, access to a post and a separate conversation.

01 / PROFILE

A personal side

One photo and bio for friends; another for family or colleagues.

02 / POST

The right people

One post can be shared with several selected circles at once.

03 / DISCUSSION

@mama
What a lovely day!

@grisha
Let's get together again.

A separate conversation

Each circle has its own reply thread under the shared post.

A circle's access rules connect the profile, post and discussion.

The system suggests. You choose the circle.

A recommendation appears for a new follower. Only you see it: confirm the suggested circle or choose another.

Without your decision, the person does not enter a private circle.

selecont

Smart suggestions.
Your choice.

- Before publishing
- Advises, never decides
- Never changes the audience itself
- The final choice stays yours

From a working demo — to the first users.

In the accelerator, we will find first users, observe real use and decide what to improve next.

01

Find first users

Invite people who want to share different things with different groups.

02

Watch it in use

Can people set up circles and publish a post with ease?

03

Learn what to improve

What was useful and what should change first?

The next step: recruitment and results are still ahead.
